

MSHA's Accident Prevention Program Safety Tip

**SAFETY
IS A
VALUE!**

“Crusher Maintenance”

Category : All Surface Mines (Except Coal) and Mills and Plants
Mine Type: Maintenance

When it comes to safety, there really is no such thing as "routine maintenance." Every job you do has the potential to result in serious injury or death if something goes wrong.

Some life saving tips to remember are:

- Do your job hazard analysis to identify all potential hazards associated with the work to be performed, and jointly discuss procedures to minimize those hazards.
- Make sure everyone is positioned so they are not exposed to the hazards.
- Support or block all components against motion, and lock out and tag out equipment.
- Ask yourself "what if?" Try to anticipate every possibility, and have a plan to deal with it.
- Make sure proper equipment is used and everyone is trained in its use.
